COLLECTION

YOU'RE OUR

DESIGNED FOR ADVENTURERS & ENTHUSIASTS

At Track we are extremely proud of our heritage and humbled by thousands of loyal customers who have travelled millions of kilometres around Australia. Our customers help us grow, but it's more than that; our customers help us improve and form the very basis of our DNA.

We are for you; the bushwalker, kayaker, fisherman, photographer, mountain biker, explorer and adventurer.

We want you to; see new sights, watch sunsets, meet new people and be with the people you love most.

INSPIRATION

More than ever before Track's new T4 Collection of Off-Road RVs offers you, your partner and family the perfect opportunity to have the camping lifestyle you choose. The T4 Collection has 3 distinct models which you can customise.

The Concerto is for families and features external cooking and the addition of bunks suitable for adolescents.

The Symphony is designed to be extremely flexible and can cater for 2 or up to a family of 6 depending on options selected.

The Rhapsody is luxury for couples and features an internal ensuite and kitchen.

Once your best fit has been selected there is further customisation that will allow you to add internal modules for more storage, additional benchtops, different cooking setups and the ability to change the bed from E/W to N/S.

Outside the T4 you can increase your living space for longer stays with a vast array of awning options and attachable rooms.

Cooking outside has never been easier as the T4 now features the beautifully finished Tvan Premium Kitchen and external drawer fridges. External storage is extremely flexible and can easily fit a Weber® Baby Q® along with all your camp fire cooking equipment.

“RVS THAT INSPIRE”

BUILT TO TAKE YOU WHERE YOU WANT TO GO

The T4 Collection is as unique and exclusive as all Track products before it.

We pitch form and function against each other to ensure we build an intuitive and comfortable living space that complements your lifestyle and enables you to explore more easily in style and comfort.

The process of designing and manufacturing our own chassis and suspension, walls, doors, windows and cabinetry (i.e. not using off the shelf parts) gives the T4 a strong and cohesive style with fit for purpose components, which we warrant for off-road use.

Our use of compression locks, thick automotive rubber seals and custom designed components also improves dust sealing over conventional parts.

Innovative features; such as central locking (activated via Redvision®) of the drawer cabinets and the slide out table ensure the cabin is found just as you left it even after a full day off-roading.

The newly refined MC2-R™ Asymmetric Link Chassis and Suspension delivers unparalleled performance over corrugations and the chassis protects the body in washouts and ruts.

WORKING FOR A BETTER TOMORROW

The aerodynamics and weight of the T4 have been developed to reduce drag while towing and to minimise the impact on the environment.

The introduction of the toilet and grey water tank help you ensure that you only leave foot prints behind.

Track is also doing its bit with our manufacturing facility running power neutral with solar and by collecting and reusing packaging from suppliers. The water we use to “deluge test” each individual van is collected from our roof and stored in tanks.

* Content of this brochure refers to both features and options available on T4. Please refer to specification and options list for accurate inclusions.

ENDLESS NEW INNOVATIONS AND FEATURES TO MAKE CAMPING EVEN EASIER

REDARC REDVISION GIVES YOU FULL CONTROL

Redvision® has been used to give you access to all the major appliance and onboard systems. Using the screen or your mobile phone (via Bluetooth app) you can; raise the roof, extend the awning, switch inside and outside lights, view energy charge / consumption, check water capacity, turn on the inverter and easily deactivate the fridge(s) for storage, lock all travel locks remotely, activate on board water pump and so much more.

The revolutionary new electrical system accepts and regulates charge from solar, the tow vehicle and an external 240V source. All circuits have fuses and there is a master power switch for storage.

Batteries types and numbers (max 3) can be changed and upgraded, without the need to change any charging components. This includes upgrading to lithium batteries.

Rooftop solar can also be expanded to an exceptional 480W (4x 120W) and there is still capacity to utilise an external solar panel.

New innovations in LED technology have allowed Track to integrate very low consumption light panels within the roof, which are dimmable and provide even diffused light. Other internal LED lights have been installed behind the overhead cupboards along with the zero gravity blinds to create a sophisticated interior while keeping lights out of your eyeline.

PREMIUM COOKING INSIDE/OUT

INSIDE: The internal kitchen features a large upright fridge, stainless steel sink and a 4-burner cooktop with grill. This can be changed to a diesel cooktop. Drawer storage is also provided under the vast benchtop.

SHOWER INSIDE/OUT

INSIDE: The Rhapsody features an internal ensuite with solid walls and raised shower base that is fully sealed and directs the runoff to an onboard grey water tank. Unlike most internal ensuites when the poptop is up solid sliding panels deliver privacy up to the ceiling, whilst providing an elevated position of the shower rose.

The internal toilet is a cassette type to simplify the black water storage and emptying process which is externally accessible.

On the Symphony and Concerto this space is replaced with more kitchen area or bunk beds respectively.

OUTSIDE: The rear shower POD has been developed from the Topaz and has been improved with better and faster access. The shower rose is now on a flick-mixer style tap and there is more storage for your shower related gear. Additionally, there is a built-in roof mounted LED, towel and toilet paper holder.

OUTSIDE: The Premium Kitchen boasts a 3 burner (2×1.5KW, 1×2.5KW) glass topped stainless steel cooktop with piezo ignition and matching stainless steel sink with flick mixer tap, draining board and cutlery drawer located below.

The kitchen features a single handed operation to lock in and out on Track Trailer's own design ball bearing runners, while the integrated windshields are deployed by simply raising them into position.

MC2-R

ASYMMETRIC LINK
SUSPENSION

All Track Trailers are built on our compact and strong hot dipped galvanised chassis.

Our Asymmetric Link independent suspension is unique. It maintains wheel contact with the ground, even over severe corrugations or deep washouts, thanks in part to the tough cross link that manages bump steer.

230mm of wheel travel is achieved through custom springs and shockers, which when coupled with the front trailing arms ensure the van tracks straight behind the tow vehicle, even over the toughest terrain.

The MC2-R Suspension® takes its name from the Australian Military specification.

'Mobility Category 2' is the highest performance rating for an unpowered vehicle. This remains unmatched by any other domestic trailer suspension system and delivers a significantly softer and flatter ride all round.

Track Trailer leads the way in design and engineering

Track Trailer has taken out a prestigious Good Design Award for their hybrid off-road caravan, the T4, under the category of Engineering Design. The T4 collection is made up of three distinct models that boast the “most flexible range of options ever”, so that customers can create exactly what they need to suit their particular flavour of travelling.

The T4 has been specially built to handle off-road tracks, thanks to its industry-leading MC2-R® chassis and suspension, special lightweight body construction, and improved dust-sealing features – to name just a few standout features.

To see the T4 in action, check out RV Daily’s exclusive story here.

Track claims to set themselves apart from competitors through their “very different” design and manufacturing methods, which they proudly say “have always provided superior function, outstanding reliability and durability and market leading resale value”. To put this to the test, they decided to enter the T4 in the Good Design Awards, and it certainly paid off.

Track claims to set themselves apart from competitors through their ‘very different’ design and manufacturing methods”

In order to win the Good Design Award, a product must be found to “advance the design profession and push the boundaries of new and innovative thinking” – we reckon Track Trailer has done exactly that, and we congratulate them on their win.
